EXPERIENCE

Founding Engineer

Sep 2025 - Present

Sono

Voice LLM agents for customer support calls.

- Designed and built the company's first product that works for new customers without custom builds
- Technical lead on customer sales calls. Ran pilots from start to end and handled customer communication during them
- Raised license plate capture from about 60% to 93% by building an eval set from real calls, switching STT provider based on it, and adding spelling-alphabet readback and retries
- Built context management for a node-based voice agent to cut latency and keep the call feeling like one conversation. Scrapped it and the parallel LLM/TTS tests once newer models could hold the full context
- Set up the team's agentic coding workflow with shared skills, project rules, hooks and an AI review step that checks changes against the rules

Python Pipecat TypeScript React Next.js Supabase

Independent Technical Advisor

Jan 2025 - Aug 2025

Miekka Solutions

Own consulting company, started during parental leave. Delivered client projects in AI, DevOps, and refurbishment operations.

Co-Founder & CTO

May 2024 - Dec 2024

Adeu

Built an AI timekeeping system for lawyers.

- Built LLM-powered MVP for automated time tracking in 3 months
- Did technical sales and problem validation interviews
- Narrowed the idea from process management software to time tracking, a shared pain for law firms

C# .NET Azure Semantic Kernel

Founder in Residence

Nov 2023 - May 2024

Antler

Validated SaaS and AI business ideas with market research and user interviews. Formed a three-person founding team and secured pre-seed funding.

Software Engineering Manager

Oct 2021 - Nov 2023

Swappie

Manager and technical lead of the factory software team, focused on refurbishment efficiency and profitability tracking.

- Led the team's system design and pushed for the simplest solution that works
- Owned the factory systems that ran production, where software downtime stopped the line
- Led factory automation projects including robotics integrations
- Changed warehousing so the most profitable phones got repaired first
- Coached engineers to make their own decisions. The team ended up mostly self-managed with little process and a rotating facilitator
- Managed up to 8 engineers. Nobody quit after the layoffs

Python Django NetSuite GCP

Senior Software Developer

Aug 2020 - Sep 2021

Swappie

Factory software team. Promoted to manager after leading the ERP project.

- Designed the per-phone lifecycle and events with finance and consultants to calculate refurbishment costs in NetSuite ERP
- Built validation and routing so each phone moved to the right step in the factory
- Integrated Blancco diagnostics and erasure into operations

Python Django NetSuite GCP

Software Developer

Jan 2018 - Aug 2020

Taaleri

Part of the internal startup team that created the Taaleri mobile app and Impakti investment product.

- Built backend for the React Native mobile application
- Cut customer login time from up to 30 seconds to under a second by caching portfolio values. The portfolio system was slow, but fund prices only updated twice a day
- Integrated the on-premises Microsoft Dynamics CRM and the Digia DiFS portfolio management system
- Managed cloud release pipelines and infrastructure

C# .NET TypeScript React React Native Azure Dynamics CRM

EDUCATION

Master's degree, Software and Service Engineering

Aalto University, 2017 - 2019

Bachelor's degree, Computer Science

Aalto University, 2015 - 2017
